

Science Journal Entry

<http://homepage.mac.com/cohora/nat/journal.html>

Use the information you have learned in Milkweed & Monarch Mania to make a journal entry on behalf of the young scientist.

Write a title and your name at the top of the document. Date the entry in the journal.

What you should include:

- * Collect and record data
- * Measurements - document the instruments needed to make each measurement.
- * Use charts or tables to organize data where appropriate.
- * Use your senses in making observations. Note any patterns
- * You may include sketches or photos
- * Take an inventory of animals found - be sure to describe them using appropriate terms.
How many does he see?
- * The classification of the plant or one animal that could be found on it.
- * Draw a small map of the location of the plant.
Include a landmark that actually exists in your community.
- * Personal observations of the environment. (Season, weather, altitude, habitat, biome)
- * Write a question he may wish to pursue using the scientific method.
- * Note what he should observe for on a subsequent visit to collect data.
- * Note any significant environmental issues related to what he may see.
- * Conclude with a statement about his or your relationship with the environment.
